

GLOBAL PORTFOLIO BATTERIES 2022

WHO WE ARE

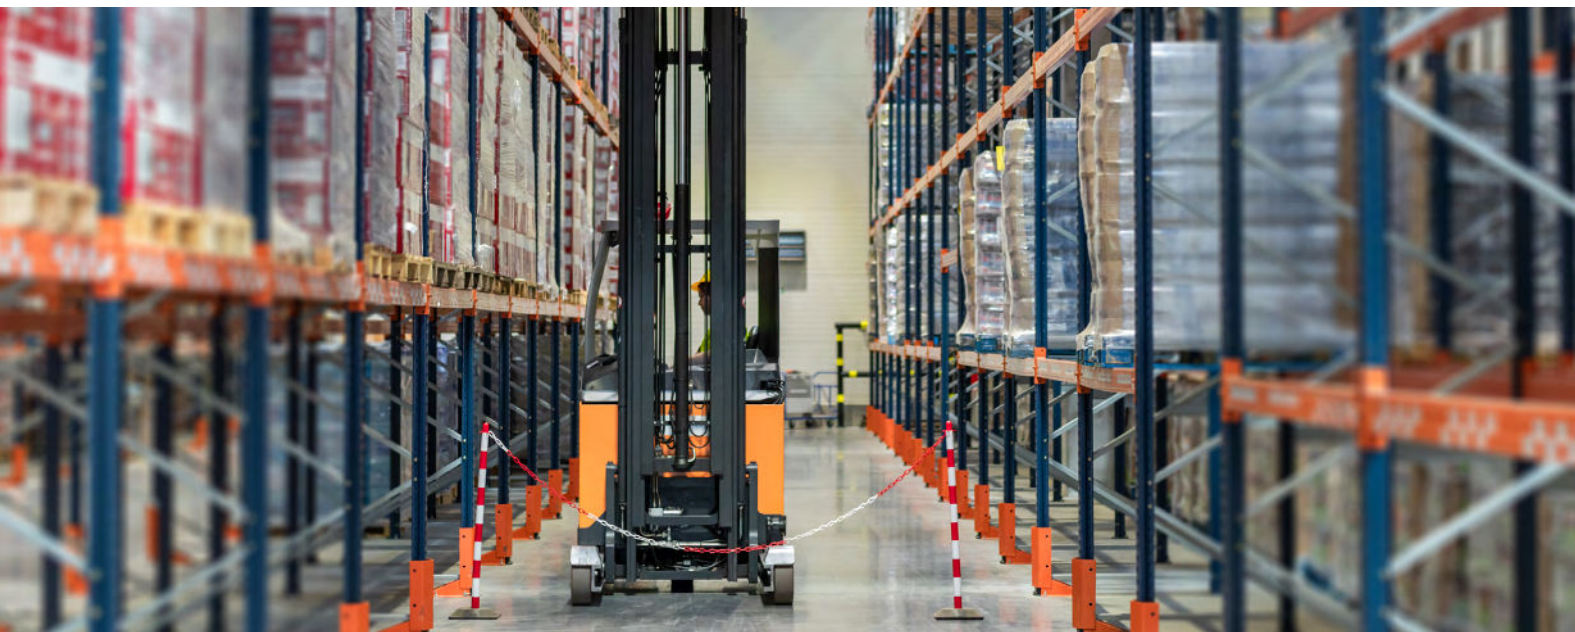

VT BATTERIES is a Spanish company specialised in the distribution of energy accumulators.

Since 2016, the entry of German capital into the company has reinforced our possibilities for growth in the national market, completing our offer in batteries for industrial sectors.

Our catalogue includes our own brands and the main brands on the international market.

We work in the traditional sectors of automotive starting and industrial batteries for stationary and traction applications.

Internationalization is one of the objectives that VT BATTERIES has in its portfolio, as well as the expansion of brands and products that allow us to be at the highest level of market demands.

ACTIVITY AREAS

Our business model seeks to offer an efficient service to the customer and is based on close cooperation with the main logistics operators to guarantee an adequate service.

We have enough stock to guarantee the viability of the most urgent deliveries. For international operations we have the support of the best specialists in multimodal logistics to coordinate means and resources for on-time delivery.

MISSION AND VISION

Battery distribution is a market that requires customised solutions. We have over 4,000 models of various brands for customised applications. Our goal is to achieve customer satisfaction by providing quick solutions to their energy storage needs.

Our growth model has always been based on collaboration with customers and suppliers, applying our values of TRUST, LOYALTY and QUALITY to build long-term relationships.

OUR BRANDS

VT Power manufactures only original equipment in the global battery market. These batteries are of the highest quality, performance and durability. All ranges are fitted with a sighting eye, which identifies the actual state of charge of the battery. The range covers all european, american and asian vehicles currently in circulation.

VT Batteries has developed a wide range of economically priced batteries with different technologies: Conventional, AGM and EFB Start & Stop and High performance. This range has the same guarantees as a first brand thanks to different agreements with our suppliers, ensuring maximum quality and service life.

LEADER BRANDS

We work with the world's leading manufacturers in the starting sector to be able to offer our customers the market's most important brands in the starting segment.

By having these arrangements in place, we have the most suitable product available in different brands to serve users who demand not only quality, but also a specific model and product.

VT has global partnerships with leading manufacturers in the European Union, Korea, China, Colombia, Turkey and Morocco. This global network allows us to meet any demand worldwide.
